

# Local Legend Buyer Journey

Identify a pain point, propose an improvement, and define success metrics

**Khwnasat Giri Narzary**  
Presenter

**The goal of this assignment is to complete a full user journey on the Local Legend app, identify a key user pain point, propose a relevant product improvement or feature, and define success metrics to evaluate impact.**

Summarize the task: journey, pain point, solution, metrics.

**User Goal (buyer): As a customer, I want to quickly find a relevant service/product and purchase it.**

Buyer-focused goal for the Local Legend experience.

# Buyer Journey: Start to Service Purchase

Step-by-step buyer flow from app entry to action

## ▲ PROBLEM

# Buyers **Lose Confidence** During **Discovery**

Confusion blocks order completion. Buyers experience confusion and **lack of trust** during service discovery, which prevents them from proceeding to complete an order.

# Evidence Supporting the Pain Point

Specific platform issues that reduce trust and usability

01 **Irrelevant service listings:** Choosing a specific service category returns unrelated items such as food products alongside actual services, which makes the user feel the platform is unreliable.

---

Unrelated items appear in service searches, harming trust.

02 **Limited information:** Seller distance is shown only in kilometers, without locality name, map view, or navigation option, making it difficult for users to assess feasibility or authenticity of the seller.

---

Sparse location data prevents quick trust checks.

03 **Cart interaction issue:** Items continue to get added when clicking the cart instead of allowing quantity control.

---

Cart behavior prevents easy quantity management.

# Make Service Discovery Intent-Driven

Reduce noise and surface trustworthy local services

**Intent-Based Service Discovery:**  
Steps to Improve service discovery through enforcing strict separation between product and service listings to ensure categories return only relevant results to the users.

Keep product and service results distinct so searches match user intent.

**Add Trust Signals:** Display seller verification status, service type, and basic performance indicators such as response rate or completed orders, add locality name and a clickable map link so users can verify seller authenticity.

Show verification, performance metrics, and location to build trust.

# Track Success with Key Platform Metrics

Clear, measurable indicators of discovery and buyer engagement

## 01 Search Result Click-Through Rate

Measures relevance and effectiveness of service discovery.

## 02 Seller Profile View Rate

Indicates buyer interest and trust in listings.

## 03 Chat / Call Initiation Rate

Reflects user confidence in engaging with sellers.

## 04 Add-to-Cart to Login Conversion Rate (for guest)

Measures how effectively the platform motivates users to proceed toward transaction.

# What Works Well?

-> Key strengths in onboarding and buyer experience

- Guest login for new users is effective.

- Seller profile layout is clean and easy to scan.

- Core buyer actions (add to cart, chat, call) are clearly visible and accessible.

# Drive Buyer Confidence Through Clear Service Discovery

Boost engagement by improving trust signals. The primary opportunity lies in improving trust and clarity during service discovery so the platform can significantly improve buyer engagement, interaction rates, and overall marketplace conversion.
